

What is Collaborative Commissioning?

All too often commissioning turns into an unpleasant and confrontational process. We aim to change that paradigm. Commissioning with SchnackelCx unites all stakeholders in a harmonious, collaborative process, with the common goal of a truly satisfied client and a successful project for all parties. No more arguing and finger pointing. Let's make commissioning what it should be – a unified effort to reduce errors and deliver an exceptional quality product.

SchnackelCx is a full service mechanical, electrical, plumbing, fire protection, fire alarm, information technology, and building envelope commissioning firm. We are supported by the vast resources and experience of our parent company, Schnackel Engineers, Inc., and are committed to fulfilling the needs of ownership, design, construction and operations.

SchnackelCx has an innovative, agile team that is quick to present solutions and are trained in the specialized systems our clients require in their facilities. Our leadership team has over 80 years of combined experience and the SchnackelCx Commissioning Technicians are familiar with all Commissioning and Retro-Commissioning Standards and procedures. We will ensure that all of your requirements are met with confidence.
